

Penetration Testing Report

ttt

Generated at: 2025-10-30 14:58

Executive Summary

Target: https://example.com
Target Type: Web Application Penetration Testing
Scope Type: White Box
Timeframe: 2025-10-29 to 2025-10-29

Vulnerability Statistics

Metric	Count
Total Vulnerabilities	2
Critical	0
High	1
Medium	1
Low	0
Informational	0

Vulnerability Findings

1. Mathematical Error Handling - MEDIUM

Description: The code does not handle the case where 'a' is zero, which would lead to a division by zero error when calculating x1 and x2.

Affected Component: Line 6-10 (computing function)

Remediation: Add a check to ensure that 'a' is not zero before performing the calculations.

Proof of Concept:

```
x1 = (-b + math.sqrt(delta)) / (2 * a) x2 = (-b - math.sqrt(delta)) / (2 * a)
```

2. Input Validation Issues - HIGH

Description: The code does not validate the input for the coefficients a, b, and c. If a user inputs a non-integer value, it will raise a ValueError, which could lead to denial of service if not handled properly.

Affected Component: Line 15-17 (input statements)

Remediation: Implement input validation to ensure that only integers are accepted. Use try-except blocks to handle invalid inputs gracefully.

Proof of Concept:

```
a1 = int(input("a :")) b1 = int(input("b :")) c1 = int(input("c :"))
```

Testing Steps

Step #	Title	Status	Completed At
1	■■■■■ ■■ ■■■■	Completed	2025-10-29 18:41
2	■■■■■ ■■■■■■■■■■■■	Completed	2025-10-29 18:41
3	■■■■ ■■■■	Completed	2025-10-29 18:41
