

Penetration Testing Report

st

Generated at: 2025-12-04 19:42

Executive Summary

Target: http://example.com
Target Type: Web Application Penetration Testing
Scope Type: White Box
Timeframe: 2025-12-03 to 2025-12-04

Vulnerability Statistics

Metric	Count
Total Vulnerabilities	3
Critical	0
High	1
Medium	2
Low	0
Informational	0

Vulnerability Findings

1. Information Disclosure - MEDIUM

Description: The help texts and labels contain sensitive information in a different language, which may not be intended for all users. This could lead to information disclosure if the application is exposed to unintended audiences.

Affected Component: WhiteBoxSourceForm

Remediation: Ensure that help texts and labels do not disclose sensitive information or are only shown to authorized users.

Proof of Concept:

```
help_text='■■ ■■■■ ■■■■■■ ■■ ■■■■ ■■■■■ ■■■■■■ ■■■■ ■■■■'
```

2. Input Validation Issues - MEDIUM

Description: The `programming\_language` field allows arbitrary choices, which could lead to unexpected behavior if not properly validated on the server side.

Affected Component: WhiteBoxSourceForm.programming_language

Remediation: Implement server-side validation to ensure that the selected programming language is one of the allowed choices.

Proof of Concept:

```
programming_language = forms.ChoiceField(...)
```

3. Cross-Site Scripting (XSS) - HIGH

Description: The `source\_code` field accepts user input without any sanitization or validation, which can lead to XSS attacks if the input is rendered in a template without escaping.

Affected Component: WhiteBoxSourceForm.source_code

Remediation: Sanitize and escape user input before rendering it in templates. Use Django's built-in template escaping features.

Proof of Concept:

```
source_code = forms.CharField(...)
```

Testing Steps

Step #	Title	Status	Completed At
1	■■■■■ ■■ ■■■■	Completed	2025-12-03 15:41
2	■■■■■■ ■■■■■■■■■■■■	Completed	2025-12-03 15:41
3	■■■■ ■■■■	Completed	2025-12-03 15:41
